

MANUEL BLANCO OFFERS HIS EXPERTISE AT A WORKSHOP IN KOREA

Sarriguren (Navarre), 23rd November 2011.- The research and development activity taking place in Europe and the development of the solar thermal power industry is the main focus of the seminar presented this week by Manuel Blanco at the 2011 International Workshop on Concentrated Solar Power taking place in Daegu, Korea.

Manuel Blanco combines his work as the Director of the Thermal Solar Energy Department of Spain's National Centre for Renewable Energies (CENER) with his Chairmanship of SolarPACES (the Implementation Agreement of the International Energy Agency for Concentrated Solar Thermal Power and Solar Chemistry), which is why he is often invited to take part in international events such as the workshop currently being held in Korea.
