

VALUE PROJECT
“SUDOE: Technology transfer and exchange for the recovery of waste from the vegetable processing industry

PRESS RELEASE

PRACTICAL WORKSHOPS ABOUT THE APPLICATION OF NEW WASTE RECOVERY TECHNOLOGIES FOR SMES IN THE AGRI-FOOD SECTOR

Over the next few days, the regions of Extremadura, La Rioja and Murcia will be holding events, including conferences and practical workshops, at which participants will find out in detail about alternatives for the recovery of waste in the agri-food industry.

During the course of the workshops, there will be a brief presentation of the VALUE project, which aims to find solutions for the recovery of waste in the agri-food industry. Solutions aimed at identifying, experimenting, validating and disseminating technologies capable of treating and recovering waste, which could be applied in SMEs. It is co-funded by the European Regional Development Fund (ERDF) through the European Territorial Cooperation Programme for South West Europe (SUDOE).

Each partner involved in this project will give a presentation of potential waste recovery technologies, taking account of the different kinds of waste produced, and will then break off into groups to plan food and/or energy recovery tests with companies interested in recovering their waste for reuse.

These events are organised by regional institutions in collaboration with AIDIA (Association for Research, Development and Food Innovation, and coordinator of the VALUE Project), AZTI (Sea and Food Technology Centre in the Basque Country) and CENER (National Centre for Renewable Energies).

CTAEX (Agri-Food Technology Centre in Extremadura) held one of these events recently. The locations and dates of the forthcoming events are: CITA LA RIOJA (Innovation and Food Technology Centre) on Wednesday 9th November, and CTNC (National Food Preservation Technology Centre) in Murcia, on Wednesday 23rd November.

Attendance is free and is aimed specifically at professionals and representatives of SMEs in the agri-food sector.
